

DataPulse AI

The Intelligent Data Platform

*"Chat with your database. Monitor data quality. Protect privacy.
All powered by AI."*

The Problem

Three challenges every data-driven company faces

1

SQL is a bottleneck

Only engineers can query databases.
Everyone else waits for reports that take days to produce.

2

Bad data breaks everything

Data quality issues go undetected until dashboards show wrong numbers to executives.

3

AI tools leak your data

Sending customer data to external AI creates GDPR, HIPAA, and compliance risks.

DataPulse AI solves all three in one platform.

The Solution

One platform. Three core capabilities.

Chat with Data

Ask questions in plain English. AI writes SQL, runs queries, explains results, and auto-generates charts.

Monitor Quality

Automated data quality checks with AI-suggested rules. Health scores and email alerts when things break.

Protect Privacy

Built-in data masking plus optional local AI that keeps sensitive data on your machine.

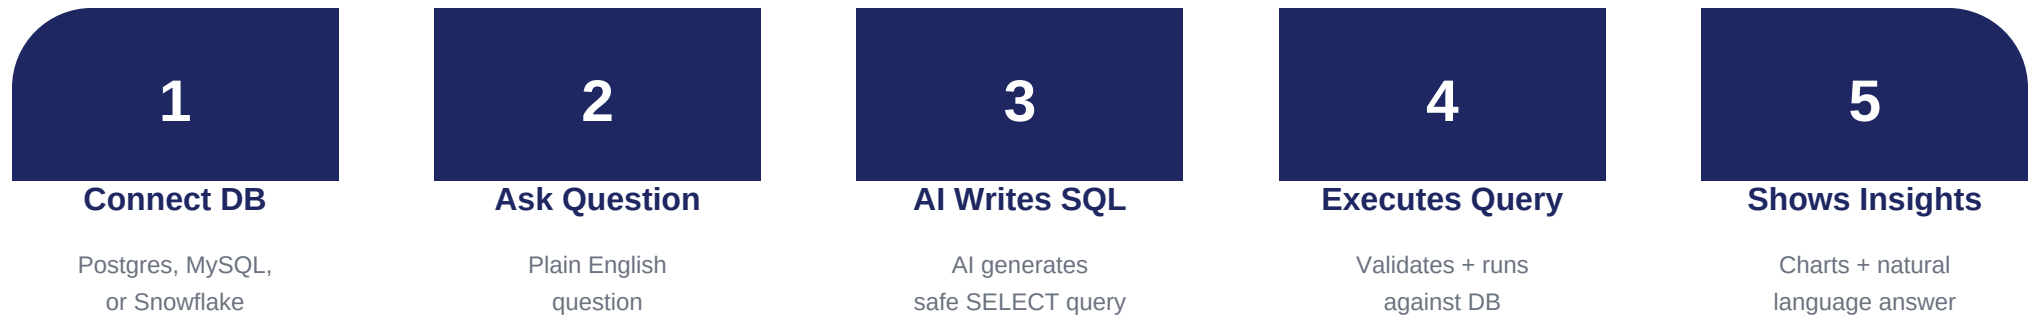

10 Powerful Features

Everything you need in one platform

01 AI Chat Natural language to SQL with auto-explanations	02 Auto Visualization Smart chart recommendations for every query	03 DQ Monitoring 5 check types, 0-100 health scores per table
04 AI Rule Suggestions AI profiles your data and recommends rules	05 Background Scheduler Automated hourly checks with email alerts	06 Data Masking Protect emails, phones, PII automatically
07 Local or Cloud AI Groq cloud or Ollama local — your choice	08 Multi-Database PostgreSQL, MySQL, Snowflake in one UI	09 Enterprise Security JWT auth, encryption, audit logs, rate limits
10 Multi-User Workspaces Isolated accounts with JWT authentication		

How It Works

From question to insight in seconds

Total time: under 10 seconds. No SQL knowledge required.

Why We Win

The only platform combining these capabilities

Capability	DataPulse AI	Monte Carlo	Great Expect.	ChatGPT
Natural language to SQL	✓	✗	✗	✓
Data quality monitoring	✓	✓	✓	✗
AI-suggested rules	✓	~	✗	✗
Auto visualization	✓	✗	✗	✗
Local AI option (privacy)	✓	✗	✗	✗
Built-in data masking	✓	✗	✗	✗
Multi-database	✓	✓	✓	✗
Annual price	\$0-\$5K	\$30K+	Free	\$20-240

Market Opportunity

A growing market underserved by existing tools

\$27B

DATA QUALITY MARKET

Projected by 2027

78%

OF DATA TEAMS

Report DQ issues weekly

\$30K+

AVG ENTERPRISE COST

For competitor tools

10x

CHEAPER THAN MONTE CARLO

With more features

The mid-market is underserved: **too small** for Monte Carlo's \$30K pricing, **too busy** for Great Expectations' hand-coded YAML configuration.

DataPulse AI is built for them.

Who Needs DataPulse AI

Six customer segments with clear pain points

Data Engineers

Want automated monitoring without building it from scratch — ship features, not dashboards

Analytics Teams

Give non-technical colleagues direct access to data with chat interface

Early Startups

Can't afford \$30K/year competitor pricing but need enterprise-grade DQ

Mid-Sized Companies

Need data quality alerts before broken dashboards reach executives

Agencies & Consultants

Manage multiple client databases from one unified dashboard

Privacy-Conscious Orgs

Healthcare and finance teams requiring local AI and data masking

Built with Modern Tech

Production-ready architecture from day one

BACKEND	FastAPI + SQLAlchemy + Pydantic + APScheduler
FRONTEND	Streamlit + Plotly for interactive dashboards
AI / LLM	Groq (Llama 3.3 70B cloud) + Ollama (local fallback)
DATABASES	PostgreSQL, MySQL, Snowflake — multi-database support
SECURITY	JWT auth, bcrypt, Fernet encryption, rate limiting, audit logs
DEPLOYMENT	Docker-ready, cloud-deployable on AWS, Railway, Render

Let's Build the Future of Data.

DataPulse AI is ready. The platform works. The architecture scales.
The security is enterprise-grade. The AI is state-of-the-art.
